Computers network via satellite.

On November 17, 1980, the world's first commercial satellite was launched by IBM & ATNA companies. It was specifically designed for high-speed business communications between IBM computers in order to provide commercial customers with advanced data, voice, video, and document transmission [4].

1992-1994 - Computer stamps

UK 01 €f.p.

Computer stamps are printed with a common 9-needle dot matrix printer. Due to a shortage of stamps in the period April 1992 - 1994, because of the independency of Ukraine, a lot of those local stamps were produced. They exist in black and red printed postage and with different values.

The famous Stock Exchange error in a corner block of 4. An inversion of the sheet before the second press pass caused a dramatic missing registration on this corner block. As a result, the top stamps have the centers inverted, while the bottom stamps have the centers missing. The 29 cent stamp design replicates a stock certificate with the two vignettes depicting the façade of the New York Stock Exchange and a view of its trading floor. Total numbers recorded of these two major errors are 56 inverted centers and 24 missing centers. This block is a great modern rarity combining the 2 errors and with the continued printing in the margin [31].
